ABSTRACT OF THE DISCLOSURE

The disclosed embodiments relate to method and apparatus for providing computer security system. The method may include calculating a hash value of an operation at an administrative system. The signed hash of the operation may be created in the administrative system. The signed hash may be received at the managed system. The managed system may validate the signed hash by using a stored reference hash. Upon determining if the signed hash is valid, the managed system may execute the operation that corresponds to the signed hash.
